

Trading Strategy: US Equity Index Futures & Options

Program Description: The Dynamic S&P Options Strategy primarily trades US equity index futures and options on their futures contracts. The strategy is designed to capture the decay of option premiums. The program sells deep out of the money options. Option contracts are written at a sufficient distance, to allow in most cases, for the options to expire worthless. Primarily uncovered or naked options are sold (although spreads are utilized at times). The program may trade index futures for hedging or speculative purposes. The program may also trade index futures directly. The trading strategy is mostly discretionary. Both fundamental and technical analysis is incorporated into the trading decision. One of the main differences to the Stock Index Writing Strategy is the shorter time period of the options till expiration.
